Introduction

What is HostelFit?

HostelFit is an all-in-one mobile app that helps hostel students log meals, count calories, and track workouts without the hassle.

Core Problem

Mess meals are fixed, schedules are packed, and staying on track feels nearly impossible.

Target Users

Built for hostel students who want a smarter, faster way to own their diet and fitness.

Our Approach

One powerful app to capture meals, monitor workouts, and keep progress moving forward.

Motivation

Growing Fitness Awareness

College students increasingly care about health — yet lack the tools to act on it

Hostel Constraints

Unlike day scholars, hostel students **cannot choose their meals** — menus are fixed 2 weeks in advance

No Tailored Solutions

Existing fitness apps and generic calorie trackers are **generic** — they ignore hostel-specific meal contexts entirely

The Opportunity

A hostel-specific app can bridge the information gap and help students achieve fitness goals despite dietary constraints — giving them an easy way to tell whether they're in a calorie deficit, maintenance, or surplus.

Problem Statement

- 1) Fixed mess menus — no freedom to choose meals, set 2 weeks in advance

- 2) Generic calorie apps — require manual food search, not hostel-aware

- 3) No calorie balance visibility — students can't see intake vs. expenditure

- 4) No goal correlation — no way to link fitness goals with actual diet

The Core Problem

Hostel students face a **unique intersection** of dietary restrictions and fitness ambitions that no existing tool addresses.

- Menus are fixed 2 weeks in advance with **no meal choice**
- Existing trackers demand manual search — impractical for mess food
- Zero visibility into daily **calorie balance** (intake vs. expenditure)

Impact: Students struggle to manage weight loss, muscle gain, or general fitness goals without actionable data.

Proposed Solution

HostelFit turns fixed hostel menus into a personalized nutrition and fitness tracking experience.

Hostel-Specific Design

Pre-loaded mess menus eliminate manual food entry — no searching, no guessing

Integrated Tracking

Single app for both meal logging and workout recording — one dashboard, full picture

Smart Calculations

Automatic calorie intake and expenditure estimation with personalized daily targets

Progress Insights

Weekly statistics, weight-tracking history, and visual calorie balance at a glance

HostelFit transforms fixed hostel menus from a fitness obstacle into a fully trackable nutrition plan — personalized to every student's goal.
